

IBRAHIM EL JICHI

Full-Stack Developer — Creator & Brand Management Platforms, React/Next.js/Node.js

Beirut, Lebanon (Open to Remote / Relocation) | Ibrahimj02@outlook.com | +961 78 860 266 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full-stack developer with direct, hands-on experience building the exact kind of platform an influencer/creator agency runs on: creator and brand relationship management, deals, contracts, invoicing, and revenue tracking. Currently own the backend for a live creator/brand marketplace platform, architected on a 170+ endpoint API and a 42-table PostgreSQL database. Comfortable owning a build end to end, from responsive React/Next.js frontends through backend architecture and deployment, and adapting quickly to a fast-paced, client-facing agency environment.

PROFESSIONAL EXPERIENCE

Software Engineer (Full-Stack) | HAUZ — CreatorHQ, London, UK (Remote)

February 2026 – Present

- ▶ Own the backend for a creator/brand marketplace platform: deals, contracts, invoicing, and revenue tracking, core operational logic used daily by real creators and brands
- ▶ Architected 170+ production REST API endpoints on a 42-table PostgreSQL (Supabase) schema with Row-Level Security and 123 SQL migrations
- ▶ Built a multi-provider AI abstraction layer (OpenAI/Groq) powering 9 production AI features, with prompt-injection defense and per-user cost/budget enforcement
- ▶ Integrated 6+ third-party services (Stripe billing, Calendly, Gmail, Google/Outlook Calendar) through a unified connector architecture
- ▶ Maintained 184 automated tests (Vitest, Playwright e2e), including concurrency/idempotency coverage that closed real billing race-condition bugs before production
- ▶ Shipped 14+ features across 3 sprint cycles with zero critical regressions across 123 commits, collaborating within a 5-person engineering team

Backend Engineer | Majlisync AI (Remote)

June 2026 – Present (Part-time)

- ▶ Designed core infrastructure for LATTICE Core, a domain-agnostic multi-agent AI decision pipeline for enterprise governance, including the full output schema and component contracts for U6 (Shared Case Memory & State Store) and U7 (Human Gate & Finalization) across PostgreSQL, S3-compatible storage, and a time-series audit trail
- ▶ Resolved cross-unit schema dependencies across 5 team members, catching field mismatches, type inconsistencies, and missing evidence-traceability links before implementation
- ▶ Conducted an independent governance review of the WORM enforcement layer, verifying immutability guarantees, version-locking, and audit trail integrity
- ▶ Built the U6 storage layer in Python (database-enforced WORM, SHA-256 content-hash verification, Case State Store, Evidence Registry, Rehydration Service) and the U7 finalization layer (Report Quality Gate, Human Authority Validator, zero-auto-execution Finalization Controller)
- ▶ Conducted structured QA of a Flutter/Firebase mobile app, catching critical bugs including a fabricated-report fallback, leaked internal code in the UI, and a debug keystore shipped on the release build

Full-Stack Web Development Intern | UNRWA & Digital Hub, Lebanon (Hybrid)

July 2025 – December 2025

- ▶ Delivered 5 full-stack projects and 9 dashboards (3-person team), including a booking platform with full role-based access control enforced at the API layer
- ▶ Designed and deployed REST API endpoints (Laravel, Express.js) with JWT authentication and Postman-validated contracts
- ▶ Operated within Agile SDLC using Jira, daily standups, sprint reviews, and Git-based pull request workflows

Freelance Web Developer | Independent, Remote

June 2023 – Present

- ▶ Sole developer on 3+ client projects across service and retail sectors, managing full lifecycle from requirements through deployment and ongoing support

Sales Executive | Al Rawda, Lebanon

June 2020 – December 2021

- ▶ Managed the full client relationship cycle: prospecting, consultative needs analysis, proposal, and closing

- ▶ Built strong stakeholder management, negotiation, and communication skills directly transferable to client-facing technical roles

RELEVANT PROJECT CASE STUDIES

Supermarket POS & Management System — *React 19 · Express 5 · MongoDB/Mongoose* [GitHub](#)

- ▶ Business problem: manual, error-prone in-store sales, inventory, and expense tracking with no real-time visibility
- ▶ Built a full internal operations system (~6,900 lines, 45 REST endpoints, 12 modules, 7 schemas): multi-currency checkout, sales, inventory, suppliers, expenses, and profit-vs-expense financial reporting
- ▶ Architecture decision: diagnosed and resolved a real concurrency bug where simultaneous cashier sessions corrupted stock counts, using atomic MongoDB update operations instead of a naive read-then-write pattern

RentHub — Booking & Revenue Platform — *Next.js · React · MongoDB* [GitHub](#)

- ▶ Business problem: manual booking coordination and payment reconciliation for shared-occupancy housing, with high risk of double-booking
- ▶ Architecture decision: self-built a room-availability engine using a sweep-line/interval algorithm rather than naive date-range checks
- ▶ Built a full Stripe integration with an automated platform-fee revenue-split engine and a financial analytics dashboard

The Digital Hub — Marketing Site & Admin UI — *Laravel 12 · PHP 8.2 · Blade* [GitHub](#)

- ▶ Built a multi-page marketing site with reusable Blade partials and an admin dashboard UI using AdminLTE-style components

TECHNICAL SKILLS

- ▶ Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap
- ▶ Backend: Node.js, Express.js, PHP, Laravel, RESTful API Design, System Architecture
- ▶ Databases: PostgreSQL (Supabase, RLS), MongoDB, MySQL, Schema Design, Query Optimization
- ▶ Business Systems: CRM/ERP-style logic, financial/revenue tracking, inventory management, booking/scheduling
- ▶ AI-Assisted Development: Claude Code, Cursor, GitHub Copilot
- ▶ DevOps & Testing: Docker, CI/CD, Git, Vitest, Playwright, Postman
- ▶ Languages: Arabic (Native), English (Fluent), French (Conversational)

EDUCATION

B.Eng. Computer Science & Communication Engineering

Lebanese International University (LIU), Beirut — March 2020 – June 2024

TRAINING & CERTIFICATIONS

- ▶ Full-Stack Development Bootcamp — SeFactory (FCS), May – Aug 2025
- ▶ Network & Telecommunications / CCNA Fundamentals, Feb – Apr 2022

VOLUNTEER EXPERIENCE

- ▶ English Instructor & Youth Mentor — Future Academy Squad, Jan – May 2021
- ▶ Community Volunteer — UNRWA, Feb 2019 – May 2020
- ▶ Volunteer — Humanitarian Relief for Development Society, Oct 2019 – May 2020
